# Viewing Multicasts Using MacTV for Mac OS

Download the MacTV sit file. StuffIt should extract the MacTV folder for you.
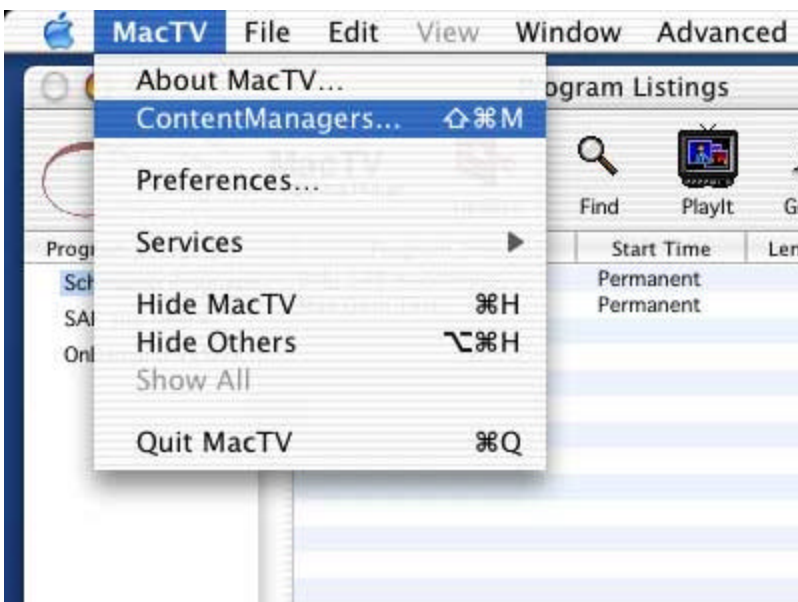

If it does not, double click the sit file to do so.

Open the **MacTV 1.2** folder and double click the **MacTV** icon.

The MacTV program will load and you will see all programs on servers currently configured with the MacTV software.

To verify that NCI-Frederick video servers are properly configured, select **ContentManagers** from the **MacTV** menu.

In the **ContentManagers** window, verify that **iptv.ncifcrf.gov** appears and is checked for use.

If it does not appear, click **New** and add the server **iptv.ncifcrf.gov** on **Port 80** and check the box under **Use**.

To view a program, double click the desired program. A Quicktime window will appear and show you the program.
